

1 in Section 3.5.5 are discussed in Section 3.3, Acquisitions and Displacements; Section 3.09, Visual Quality;
2 Section 3.10, Air Quality; and Section 3.11, Noise and Vibration.

3 ***Project-Specific Mitigation***

- 4 • Conduct construction activities during nighttime hours to minimize traffic detours, delays, and spillovers
5 into the neighborhood. Shield nighttime lighting.
- 6 • Hold community meetings before construction starts to inform residents of the construction timeline,
7 relevant staging plans, ramp and road closures, and detour plans.
- 8 • Install temporary signage to inform drivers of traffic delays because of construction and/or heavy
9 equipment entering or leaving the highway may be installed.
- 10 • Provide signs for local business assistance alerting customers of continued operation and a hotline for
11 construction information.
- 12 • Conduct regional outreach activities to provide information on construction-related impacts and detours
13 that include communications to businesses, agencies, and community-based organizations within the
14 greater Portland and Vancouver area, as well as to WSDOT and ODOT. Traffic advisories and updates
15 would be made available to the public to help make travel choices.
- 16 • Place communication and signage for temporary routes for pedestrians and biking well in advance of the
17 detour areas. Wayfinding signage would be accessible, consistent, thorough, and maintained.
- 18 • Coordinate with affected property owners to minimize potential impacts to structures and access points
19 during construction.
- 20 • Restore removed landscaping on properties following construction.
- 21 • Pay property owners in exchange for the use of their property during construction.
